Seattle, WA 98108

Subject: Deicing Aircraft

Dear Mr. Shackelfors:

The Federal Aviation Administration (FAA) has recently published change 1 to AC 150/5200-30A which lists the FAA approved aircraft deicing fluids. Propylene Glycol and Potassium Acetate-Base fluids are approved and recommended by the FAA.

You will note that the popular Ethylene Glycol is not approved and will not be used on Boeing Field due to its classification as a hazardous air pollutant.

If you have questions or you need reference materials, please contact Bob Nonas at the Airport Maintenance Shop, (206) 296-7390.

Very truly yours,

Jack Frazelle, A.A.E.  
Assistant Airport Manager
